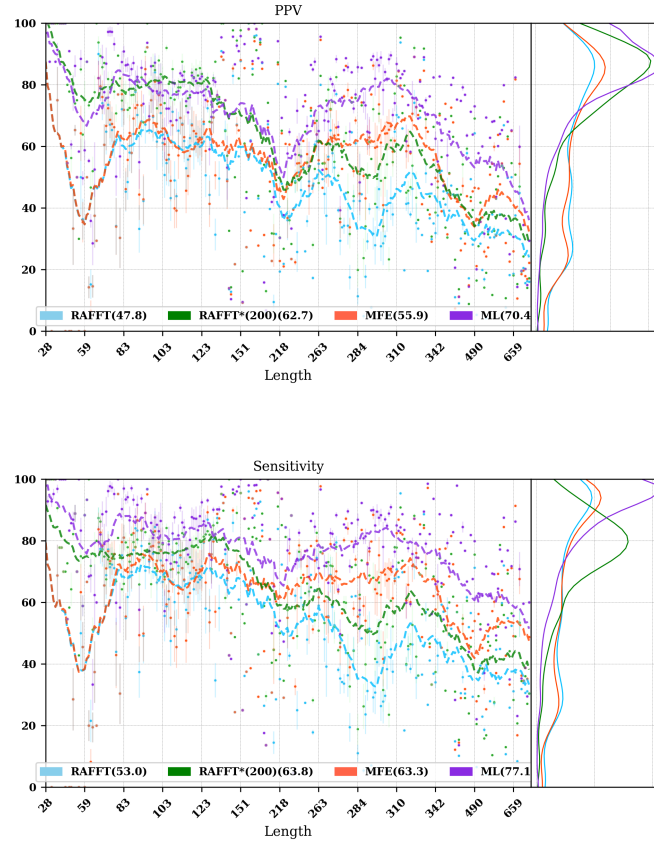

Figure 1: **Predicted positive values and sensitivity results.** RAFFT (blue) displayed the best energy found. RAFFT*(200) shows the best score found among 200 saved structures. Left pans show the density (sequence-wise) of the accuracy measures.

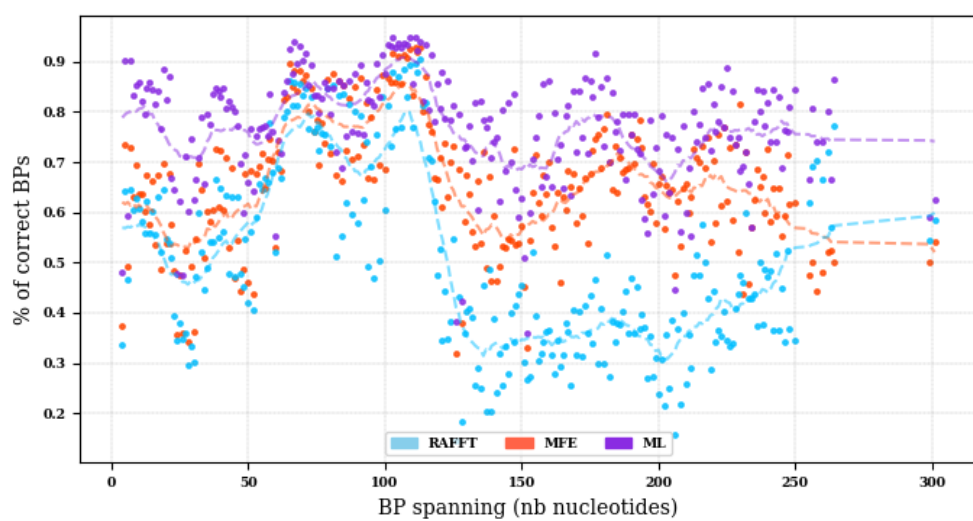

Figure 2: **Base pair spanning:** It shows the percent of base pairs predicted found in the known structures per number of nucleotides between them.

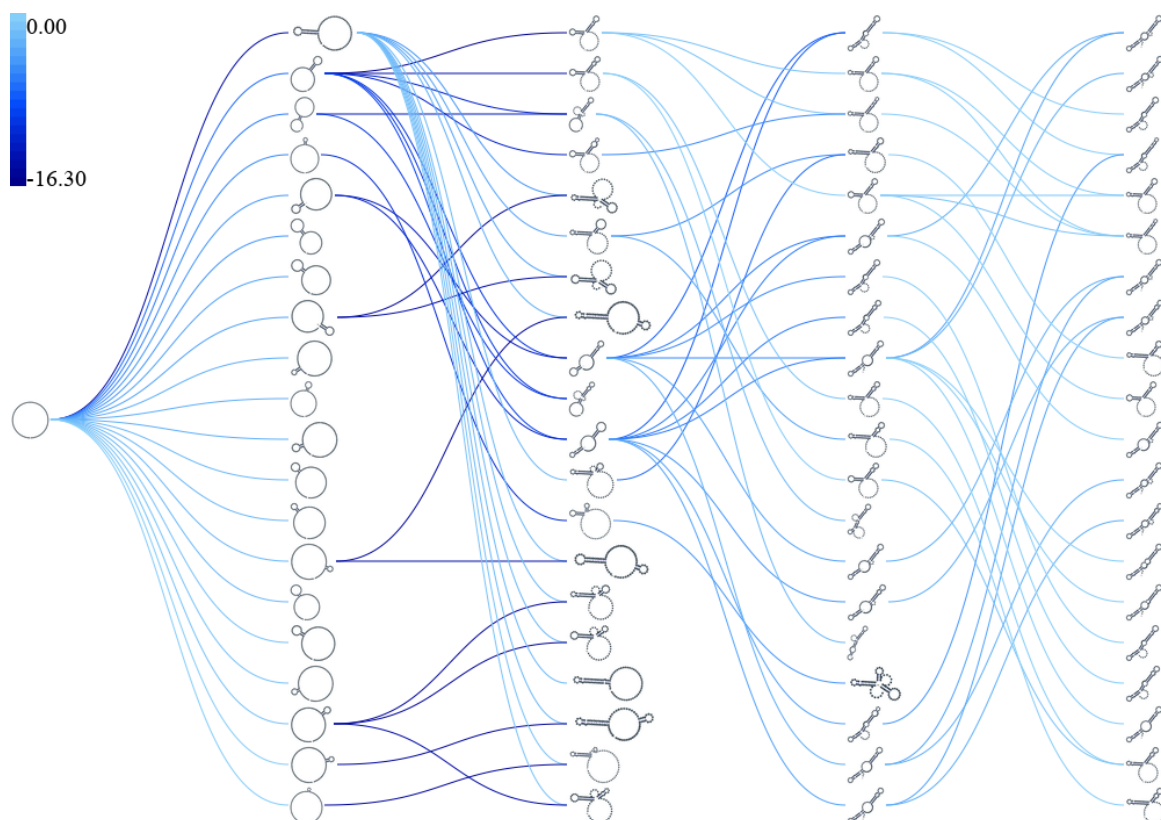

Figure 3: **Fast-folding paths with 20 saved structures for the Coronavirus frameshift-stimulation element.**
